

FAIN — Fixed Assets Inventory

FAIN — Fixed Assets Inventory, a common project of Resco and ORIWIN, is a ready-made solution for fixed assets management and inventory with advanced mobile capabilities. This brand new solution is integrated into the SAP ERP environment which brings standardized and familiar UI, and fast implementation.

FAIN

FAIN is a complex product for inventory and fixed assets management in SAP ERP.

FAIN consists of the following parts: FAIN — fixed assets SAP add-on enhancing standard FI-AA functionality, FAIN Touch — .NET CF application optimized for Windows Mobile devices, user guide, installation and customization guide, and for Professional and Enterprise Edition both source codes and developer guide.

The SAP add-on

FAIN (SAP add-on) includes tools that support and optimize the entire process of inventory and fixed assets management. Furthermore, it allows barcode label printing directly from SAP, creation of inventory list and inventory management. FAIN enables the processing of data collected during inventory. Moreover, it is possible to do asset inventory reporting and update FI-AA asset master data.

FAIN Touch

FAIN Touch is a .NET application optimized for Windows Mobile devices. It identifies fixed assets by barcode and supports the currently

Key benefits

- Upgrade of standard SAP functionality
- Easy and intuitive operation of mobile application with finger-touch functionality
- Time saving — fixed assets identification by barcodes
- Elimination of error factor
- Cost savings — FAIN is fully integrated into the SAP ERP

used barcode labels. Thus, there is no need of fixed assets relabeling. The application has user friendly UI and intuitive operation with finger-touch functionality. Moreover, it is high performance optimized within HW limitations of mobile devices. Developers put significant emphasis on high security and reliability of the application — system installation is launched from a flash card and all collected data is stored there. FAIN Touch is optimized for Motorola MC55 mobile device featuring a barcode scanner.

Inventory Process

FAIN contains tools to support the fixed assets management and inventory process. The inventory process has following phases:

Creation of Inventory and Inventory List Selection

The starting phase of the inventory process is creation of inventory in SAP. Afterwards, the inventory list is assigned to the created inventory.

Fixed Assets Identification

The data selected in the inventory list can be easily copied to the mobile device. The fixed assets identification is performed by mobile device using its built-in barcode scanner. The process of fixed assets identification is simple and the user capitalizes on intuitive operation of FAIN Touch at this phase.

Inventory Processing and Evaluation

Data collected by the mobile device is partially processed in the device. Complete evaluation is done in SAP. Possible error statuses of fixed assets, such as change of location, missing or damaged fixed

assets, are being solved here. After the inventory processing is done, it can be closed and the data are archived and stored in SAP.

Labels Print

The system enables label print directly from SAP using thermo transfer printer. The labels can contain both barcode or RFID chip, and text for simplified assets or rooms identification.

Inventory Compilations Print

All compilations are created in SAP by standard tools. The standard compilations can be modified and customized according to the needs of customers.

Administration

FAIN contains administration and management tools for the users of mobile devices and notes numbering.

System requirements:

SAP:

- Version 5.0 and above

Mobile device:

- OS Windows Mobile 2003 and above
- 64 MB memory
- 2D barcode scanner
- Flash memory card slot

Label print:

- Thermal transfer printer with 300dpi minimum
