

Resco Photo Manager

New way of presenting your photos to your friends

Imagine you just came back home from a vacation and your friends as well as members of your family cannot wait till you show them all the photos you had made there. Did you use your cell phone camera? No computer present? No problem! Present them quickly and comfortably directly from your phone! Use a slideshow that would interactively adapt to your requirements, photo by photo. Change the slideshow speed, change the effects and quickly skip the unwilling photos. See all the comments you added, or play audio records you made to any of the photos. Do all of these actions during the slideshow itself! Your cell phone becomes a true photo presentation manager.

How is this all possible?

New Resco Photo Manager comes with an innovative slideshow solution, which allows users to work with this tool interactively. All the settings can be modified during the slideshow itself. Do it quickly! Move forward, backward, pause, resume, stop, zoom the image, or modify set of other interesting attributes such as slide effects or slideshow speed (3 levels). Everything you can imagine about a photo slideshow is possible!
